

ABSTRACT

The present invention relates to a micro-abrasion device comprising:

- a first reservoir intended to contain a powder to be sprayed onto a surface that is to be treated,
- a second reservoir intended to collect the used powder,
- a handpiece designed to be applied against the surface that is to be treated.

This device comprises a removable cartridge (5) that can be fitted onto the device and removed independently of the handpiece and comprising the first and the second reservoirs.
